Task ✕ Walkthrough Implementa

Task less than a minute ago

Task: Run the Project

Analyze project structure and configuration

Flight Booking App - MVP (React + Node.js [JavaScript])

Goal

Tech Stack

- Frontend: React 18 + Vite, JavaScript, Tailwind CSS
- Backend: Node.js + Express, JavaScript
- Communication: Rest API

use TypeScript

Proposed Changes

1. Project Structure

Create two top-level directories: `/frontend` and `/backend`

2. Backend Initialization (`/backend`)

- Initialize `package.json` (ES modules: `"type": "module"`) and install `express`, `cors`
- Create `src/data/flights.js` with mock flight data
- Create `src/server.js`
  - Set up Express server with CORS
  - Implement `GET /api/flights` endpoint accepting query parameters (origin, destination, date) to filter mock data
